

ABSTRACT OF THE DISCLOSURE

A boring drill for toy model includes a conic drill bit. A connecting rod extends from one end of the drill bit for connecting with a drive for rotationally driving the drill bit. The drill bit has at least one blade section and marked face. Scales and sizes denoting the scales are marked on the marked face for measuring the diameter of the bore. Each scale corresponds to the diameter of the bore drilled by the drill bit. The size denoting each scale shows the size of the diameter of the bore drilled by the drill bit.
